## Executive Summary

The 2023 Strategic Housing and Economic Land Availability Assessment (SHELAA) provides an up to date picture of the supply of land for housing and economic development for the period 1 April 2023 to 31 March 2038. The assessment has been prepared in accordance with national planning policy and guidance and will be used to inform the preparation of both the emerging plan - Homes, Spaces, Places and Places for Everyone.

This assessment provides a review of the sites identified in the 2021/22 version of the SHELAA and takes account of completions on all sites at 31 March 2023. In addition, it includes new sites with planning permission and reviews the small site windfall allowance to complete the overall residential land supply picture for the next 15 years. It also includes new sites which have been put to the council, where this is appropriate after careful consideration.

Of the 1,207 sites assessed, 327 have been deemed to possess development potential and the capacity to deliver a combined total of 5,995 gross additional dwellings. Taking into account projected losses of 88 dwellings and the annual small sites windfall allowance of 455 net additional dwellings the potential supply is **6,362 net additional dwelling** for the 15 year period, short of both the borough's proposed target of 7,441 net additional dwellings for the years 2023 to 2038 within Places for Everyone, and the Local Housing Need of 10,215 net additional dwellings, over the same period.

While Places for Everyone maintains a strong focus on directing new housing towards previously developed sites such as those identified within this assessment, there is a need to allocate sites beyond the urban area, such as at Godley Green and the South of Hyde. However, meeting exact numerical needs identified in the plan alone is not enough and there is a need for sufficient flexibility within the land supply to demonstrate that it is deliverable, viable and robust.

This flexibility helps make reasonable allowance over the long term for the possibility that some sites may not come forward as envisaged, enables a degree of choice and ability to address viability challenges, whilst also ensuring the Green Belt boundary can endure beyond the proposed plan period, consistent with national planning policy. This is why in numerical terms the baseline land supply, supplemented by allocations, is greater than the proposed target as set out within Places for Everyone. This is not a sign that excess land has been identified but is in fact necessary to demonstrate that the proposed targets set can be met, as discussed further within the Places for Everyone Housing Topic Paper<sup>1</sup>.

For **office** development eight sites have been identified with a potential to yield a gross supply of **17,817 square metres of floor space**. For **industry and warehousing** development 32 sites have been identified with the potential to yield a gross supply of **122,653 square metres of floor space**. This is derived from a combination of extant planning permissions and vacant employment land identified through the Council's annual monitoring.

An assessment of retail floor space is not currently included in this report.

The SHELAA also sets out Tameside's five-year supply of deliverable housing sites and concludes that Tameside has a housing land supply equivalent to **2.7 years** for the five-year period 1 April 2023 to 31 March 2028. However, the successful progression of Places for Everyone will, as a result, help to ensure the Council is able to demonstrate a five-year supply of deliverable housing sites in the future.

## 1. Introduction

- 1.1. Paragraph 60 of the National Planning Policy Framework 2021<sup>2</sup> (NPPF) states that to “...support the Government’s objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay.”
- 1.2. For strategic plan making authorities to have a clear understanding of the land available in their area, paragraph 68 of the NPPF advises they prepare a strategic housing land availability assessment (SHLAA) to identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. Paragraph 68 also states that “Planning policies should identify a supply of:
  - a) specific, deliverable sites for years one to five of the plan period, and
  - b) specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15 of the plan.”
- 1.3. Paragraph 81 of the NPPF states that “Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development.” Paragraph 82 of the NPPF goes on to explain that planning policies should set out a clear economic vision and strategy to encourage sustainable economic growth, set criteria, or identify strategic sites to meet anticipated needs over the plan period and seek to address potential barriers to investment. In addition, paragraph 83 of the NPPF advises that “Planning policies and decisions should recognise and address specific locational requirements of different sectors.”

---

<sup>2</sup> The 2021 iteration of the National Planning Policy Framework informs the 2023 SHLAA methodology.

---

- 1.4. Planning Practice Guidance<sup>3</sup> advises that plan making authorities may carry out land availability assessments for housing and economic development as part of the same exercise, in order that sites may be identified for the use(s) which is most appropriate. In line with this guidance, and to provide a comprehensive picture of the land supply in Tameside, the Strategic Housing and Economic Land Availability Assessment (SHELAA) combines residential, industry, warehousing, office and retail land availability.
- 1.5. Having regard to the above, Tameside Council has produced this combined SHELAA that identifies the potential future supply of land for housing and economic development for the 15-year period 1 April 2023 to 31 March 2038.
- 1.6. The purpose of the SHELAA is to:
- Identify sites and broad locations with potential for housing and economic development;
  - Assess their development potential;
  - Assess their suitability for development and the likelihood of development coming forward (i.e. their ‘availability’ and ‘achievability’);
  - Informs and makes use of sites identified in the Tameside Brownfield Land Register<sup>4</sup>;
  - Inform Places for Everyone (PfE)<sup>5</sup>; and
  - Tameside’s emerging Plan - Homes, Spaces, Places.
- 1.7. The assessment will form a key part of the evidence base used to inform policies in these development plans and to support the delivery of land to meet identified needs. However, this assessment is not Council policy and

---

<sup>3</sup> DLUHC and MHCLG (2019). Planning Practice Guidance, Housing and Economic Land Availability Assessment, Paragraph: 001 Reference ID: 3-001-20190722

<sup>4</sup> <https://www.tameside.gov.uk/planning/brownfieldregister>

<sup>5</sup> <https://www.greatermanchester-ca.gov.uk/what-we-do/planning-and-housing/places-for-everyone/>

does not allocate land for development; its purpose is to identify a future supply of land which is suitable, available and achievable for housing and economic development uses over a 15-year period<sup>6</sup>. The allocation of land will be done through the forthcoming PfE and Homes, Spaces, Places.

- 1.8. **It is important to clarify that identification of land in this assessment does not imply that either planning permission will be granted or that a site will be allocated in the local plan.** All land and future development proposals remain subject to the plan making and development management processes. The assessment does not preclude land from being developed for uses other than that identified in this assessment, nor does it preclude the possibility of development being granted on sites that have not been included in this assessment.

## 2. Scope of the Assessment

- 2.1. This report builds on previous iterations of the Tameside SHLAA and SHELAA, the 2013 Draft Employment Land Review and the Council's annual housing and employment land monitoring.
- 2.2. The SHELAA considers the potential development of sites for housing and economic uses including offices, industrial and warehousing. It also considers the potential for a mix of uses on individual sites, particularly those within town centres.
- 2.3. The baseline date for this assessment is 1 April 2023. It identifies sites for inclusion with the short-term five-year land supply covering the period 1 April 2023 and 31 March 2028, the medium-term 1 April 2028 and 31 March 2033 and the longer-term supply between 1 April 2032 and 31 March 2038.

---

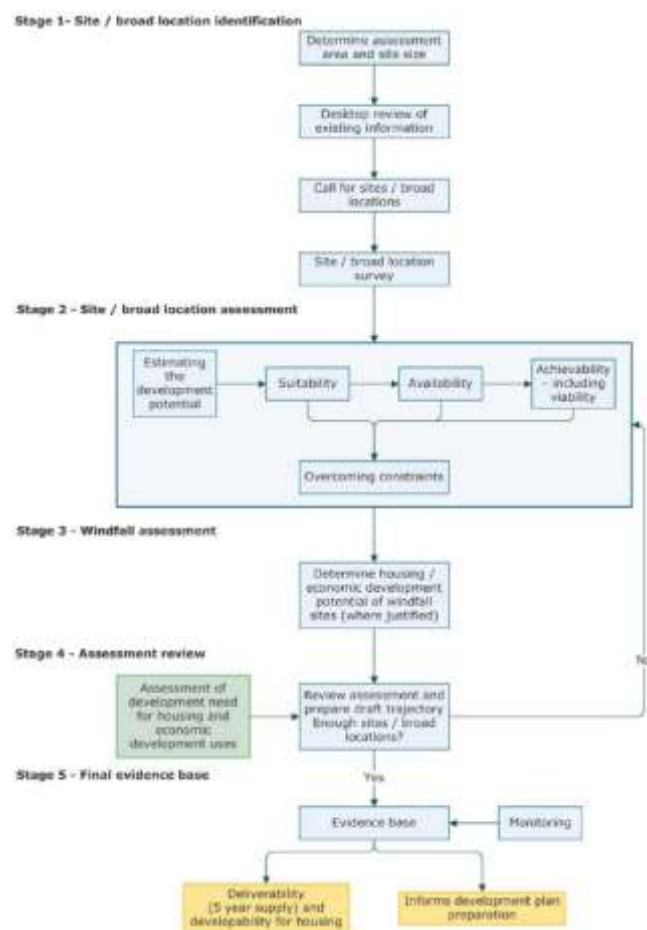

<sup>6</sup> DLUHC and MHCLG (July 2019) Planning Practice Guidance, Housing and economic land availability assessment, paragraph 001 Reference ID: 3-001-20190722

---

- 2.4. The SHELAA also sets out the methodology used to calculate the borough's five-year housing land supply position within section five of this report. This work has been undertaken in line with requirements set out in the National Planning Policy Framework and Planning Practice Guidance.

### 3. Methodology

- 3.1. The SHELAA follows the methodology flowchart set out in Planning Practice Guidance as follows:

**Figure 1:** Planning Practice Guidance methodology<sup>7</sup>

- 3.2. How the Council's SHELAA methodology relates to Government Planning Practice Guidance<sup>8</sup> (PPG) is set out in the following sections.

<sup>7</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph: 005 Reference ID: 3-005-20190722.

<sup>8</sup> <https://www.gov.uk/guidance/housing-and-economic-land-availability-assessment>

## Stage 1: Site and Broad Location Identification

### Geographic area of assessment

- 3.3. The PPG advises that the assessment needs to be undertaken and regularly reviewed, working with other local planning authorities in the relevant housing market area or functional economic market area, in line with the duty to cooperate and need to maintain statements of common ground<sup>9</sup>. The 2021 Greater Manchester Strategic Housing Market Assessment states that ‘Although Greater Manchester has important and valuable relationships with neighbouring districts and further afield, we can reasonably define the Greater Manchester area as a single HMA for strategic planning purposes’<sup>10</sup>.
- 3.4. The PPG states that the area selected for an assessment should be the plan making area and that this could be the local planning authority area, two or more local authority areas, or areas covered by a spatial development strategy<sup>11</sup>. At a Greater Manchester level there is agreement that each of the nine<sup>12</sup> GM local planning authorities working collaboratively on PfE, should review their land availability assessments regularly in line with the NPPF and the national methodology set out in the PPG. These assessments will be used to inform development plans at both the local authority and Greater Manchester levels; with district data collected by the Greater Manchester Combined Authority used to inform PfE. For clarification this assessment only covers the Tameside local authority area.

### Who should plan makers work with?

- 3.5. This assessment has also been informed through consultation and joint working with the following:

---

<sup>9</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and Economic Land Availability Assessment, paragraph: 007 Reference ID: 3-007-20190722.

<sup>10</sup> GMCA (April 2021). Greater Manchester Strategic Housing Market Assessment, page 14.

<sup>11</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph: 006 Reference ID: 3-006-20190722.

<sup>12</sup> Bolton, Bury, Manchester, Oldham, Rochdale, Salford, Trafford, Tameside and Wigan.

- Market intelligence and knowledge of particular sites;
- Discussions with developers, agents and land promoters;
- Discussions with the Council's Development Management Officers;  
and
- Internal discussions with other Council services including  
Development and Investment, Highways, Housing, Estates and  
Education.

**Should the assessment be constrained by need for development?**

- 3.6. The PPG advises that the 'assessment should identify all sites and broad locations (regardless of the amount of development needed) in order to provide an audit of available land<sup>13</sup>'. Given this broad scope the assessment will identify all land opportunities that exist within the borough that may be suitable for the scale of development identified in Homes, Spaces, Places and that will contribute towards the requirement in Places for Everyone.

**What site and broad location size should be considered for the assessment?**

- 3.7. The PPG states that plan makers will need to assess a range of different site sizes from infill opportunities within existing settlements to opportunities for large-scale developments such as urban extensions.
- 3.8. The PPG<sup>14</sup> also suggests the consideration of all sites and broad locations capable of delivering a minimum of:
- For housing – minimum of five or more dwellings; and
  - For economic development – 0.25 hectares or 500 square metres of floor space.

---

<sup>13</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph 008 Reference ID: 3-008-20190722.

<sup>14</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph 009 Reference ID: 3-009-20190722

3.9. However, the PPG allows plan makers, where appropriate, to consider alternative site size thresholds<sup>15</sup>. Therefore, this assessment uses the approach to thresholds set out below.

3.10. For the purposes of this assessment the Council has applied the following two-tier approach to identify housing sites for inclusion in the supply:

Short term 0-5 years:

- No minimum size or yield threshold will be applied to sites with either an extant full planning permission or that are consented and under construction; and
- A minimum threshold of 9 dwellings, i.e. minor residential development, will be applied to sites with an extant outline permission.

Medium to long term 6-15 years:

- A threshold of 10 dwellings or more, i.e. major residential development, will be applied to sites with an extant outline permission unless the Council has clear evidence that housing completions will begin on site within the short term 0-5 years.
- A minimum threshold of five dwellings or more will be applied to all sites that do not have an extant planning permission.

3.11. No threshold has been applied to sites identified within 0-5 years of the supply where they have full extant planning permission through the development management process or are consented and under construction.

3.12. The suggested minimum threshold of five dwellings or more has been applied for those sites identified within 6-15 years of the supply. The exclusion of small sites (1 to 4 dwellings) from the medium- and long-term supply is offset by a small sites' windfall allowance. The small sites windfall allowance is based on historic delivery rates on small sites. Further details of how this is

---

<sup>15</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph 009 Reference ID: 3-009-20190722.

calculated set out later in this document (See Stage 3: Windfall Assessment).

3.13. The SHELAA aims to promote the efficient use of land by optimising development potential for sites within the areas identified within Table 2 in line with proposals in:

- The Government housing white paper ‘Fixing our Broken Housing Market’;
- The NPPF Chapter 11 Making effective use of land;
- The 2004 Tameside Unitary Development Plan (UDP) Policy H7 - Mixed use and density; and
- PfE Policy JP-H4 – Density of New Housing.

3.14. For office, industrial and warehousing development the following thresholds have been applied:

- A standard threshold of  $\geq 500$  sq.m of gross floor space; and
- A lower threshold of  $\geq 0.1$  hectares and above for office, industrial and warehousing sites within identified town centre boundaries as defined by the 2004 Tameside (UDP) proposals map. The Council believes that these smaller sites may present opportunities for high yield/high density development.

3.15. The threshold used to determine which office, industrial and warehousing sites are included for assessment has been amended for this iteration of the SHELAA. The transition in this issue of the SHELAA to a 500 square metres (gross floor space) standard threshold takes into account both the advice in the PPG<sup>16</sup> and the use of gross square metres, rather than land-based targets, for office and Industry and warehousing in Places for Everyone.

---

<sup>16</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph: 009 Reference ID: 3-009-20190722

- 3.16. For retail development a gross threshold of 500 square metres (gross) of floor space has been applied in line with the methodology set out in the PPG<sup>17</sup>. PPG describes gross retail floor space (or gross external area) as the total built floor area measured externally which is occupied exclusively by a retailer or retailers, excluding open areas used for storage, display or sale of goods<sup>18</sup>.

### **Identification of sites and broad locations**

- 3.17. To be comprehensive the assessment will actively identify and review a wide range of sites including those which could be improved, intensified or changed. Policy constraints which would restrict development potential will be clearly set out and considered in each site appraisal. It should be noted that whilst the scope of the assessment will not exclude sites, the assessment itself will identify and subsequently discount sites that are unlikely, in practice, to ever be redeveloped for residential or economic purposes.

### **Types of sites and sources of data used**

- 3.18. In line with paragraph 68 of the NPPF the SHELAA includes an assessment of all relevant available data sources and determines whether a site is deliverable and developable as part of a desktop review. To be considered deliverable in the short term, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years<sup>19</sup>. For a site to be considered developable in the medium (6-10 years) and long terms (11-15+ years), sites should be in a suitable location for housing development with a reasonable prospect that they will be available and could be viably developed at the point envisaged<sup>20</sup>.

---

<sup>17</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph: 009 Reference ID: 3-009-20190722.

<sup>18</sup> DLUHC and MHCLG (2020). Planning Practice Guidance: Town centres and retail, footnotes.

<sup>19</sup> DLUHC and MHCLG (2021). National Planning Policy Framework, Annex 2: Glossary - Deliverable

<sup>20</sup> DLUHC and MHCLG (2021). National Planning Policy Framework, Annex 2: Glossary – Developable

## **Type of site and data sources reviewed**

3.19. Desktop review of existing information consisted of:

- Sites with extant planning permission or consented and under construction at 31 March 2023 for the uses covered by this assessment;
- Sites allocated in the UDP for housing and economic development (or mixed-use allocation);
- Sites with a planning application that is pending determination;
- Sites with expired permission for residential and / or employment uses, but where it is considered that there is still development potential and are not excluded due to their size or yield being below the thresholds above in paragraphs 3.10 and 3.15;
- Vacant and derelict previously developed land (brownfield) and buildings identified through the Council's historic National Land Use Database (NLUD) records;
- Other underused land and buildings;
- Ordnance Survey maps;
- Ariel photography;
- Greenfield land;
- Land in Council ownership and other surplus public sector land; and
- Land in existing housing areas where there is potential for redevelopment and redesign.

3.20. In addition to the desktop survey work outlined above the Council has reviewed additional resources, such as:

- Previous iterations of the SHLAA and SHELAA;
- The Council's Brownfield Land Register;
- The Council's 2017/18 Open Space Review;
- The Council's Draft (2013) Employment Land Review;
- The Council's annual housing and employment monitoring data; and
- Information from site visits where considered necessary.

- 3.21. All information submitted or attained through the above data sources and processes has been utilised in the production of this SHELAA. All sites covered by the assessment have been mapped on the Council's Geographical Information System (GIS).

#### **Call for Sites and broad locations**

- 3.22. The SHELAA will be updated on an annual basis and presents an ongoing opportunity for stakeholder engagement. Therefore, stakeholders are encouraged to contact the Council's Planning Policy Team<sup>21</sup> and complete a land availability pro-forma with up-to-date information on sites that are either currently identified within the SHELAA or to suggest any additional sites not currently included<sup>22</sup>. Information submitted up to 31 March each year will be used to inform the annual update of the SHELAA.

#### **Site and broad location surveys**

- 3.23. The PPG suggests that site surveys should be proportionate in their detail to the level required for a robust appraisal with more detail required where sites are considered to be realistic candidates for development<sup>23</sup>.
- 3.24. In line with the PPG the range of characteristics recorded during the surveys includes:
- Site size, boundaries and location;
  - Current land use and character;
  - Land uses and character of surrounding area;
  - Physical constraints, such as access, topography, flood risk etc.;
  - Potential environmental constraints;
  - Proximity to services and other infrastructure, such as public transport;
  - Consistency with the development plan's policies;

<sup>22</sup> <https://www.tameside.gov.uk/planning/ldf/evidence/shlaa>

<sup>23</sup> DLUHC and MHCLG (2019) Planning Practice Guidance: Housing and economic land availability assessment, paragraph: 014 Reference ID: 3-014-20190722.

- Development progress (where sites have permission); and
- Initial assessment of whether the site is suitable for a particular type of use or as part of a mixed-use development.

## Stage 2: Site/Broad Location Assessment – Estimating the Development Potential

### Calculating the development potential

3.25. The development potential (yield) of each site can be estimated using existing or emerging plan policy including locally determined policies on density. The PPG also advises that plan makers seek to make the most effective use of land in line with policies in the NPPF<sup>24</sup>. In order to estimate the potential housing yield for each site the following has been taken into account:

- Policy H7 (b) of the adopted (2004) Tameside Unitary Development Plan (UDP) encourages ‘schemes which make efficient use of land through housing densities between 30 and 50 dwellings per hectare net, or greater in locations highly accessible by public transport’. Locations that the Council consider to be highly accessible by public transport and appropriate for site density optimisation include town centres; sites close to rail or Metrolink stations; and along high quality / high frequency bus corridors (See Table 2 below);
- Tameside’s adopted (2010) Residential Design Supplementary Planning Document Policy RD3, which sets a minimum density of 30 dwellings per hectare;
- Analysis of densities recently achieved in different locations across the borough, taking into account the type of residential developments that are currently being delivered by the market (see Table 1 below).

---

<sup>24</sup> DLUHC and MHCLG (2021), National Planning Policy Framework Section 11. Making effective use of land.

- 3.26. Table 1 demonstrates the range of residential densities observed across the borough based on sites with major permissions (10 dwellings or more) over the period 1 April 2015 – 31 March 2023. Further information is included at Appendix 1.
- 3.27. Housing densities range from 19 dwellings per hectare (dph) to 92 dph with an average of 37 dph. The 57 sites analysed are distributed across areas considered to have different degrees of optimisation potential for density. Lower densities were generally observed outside of town centre or accessible public transport zones, which are defined in Table 2 below. Therefore, a minimum density of 35 dph has been applied to all sites considered suitable for residential development falling outside of town centres and transport accessibility zones.
- 3.28. Mixed housing and apartment schemes exhibit a broader range of densities, ranging from a low of 30 dph to a high of 102 dph. Of the 24 sites identified in Appendix 1, 18 are located in town centre or public transport accessibility zones considered suitable for optimisation. The average density across the 24 sites is 58 dph. However, development at these densities is considered to underestimate the potential of residential development opportunities that lie within town centre or public transport accessibility zones. Therefore, the minimum density for mixed housing and apartment schemes, for the purposes of this assessment, has been set at 75 dph.
- 3.29. Apartment schemes across the borough range from 55 to 1,100 dph. Of the 31 sites identified in Appendix 1, 28 are located in town centre or accessible public transport zones and are considered suitable for optimisation. The average density across all sites is 245 dph. However, of the 31 apartment sites listed in Appendix 1, 14 are from change of use and are characterised by an average density of 330 dph. This includes some schemes that have come forward through a combination of the permitted development regime and change of use. When the 17 new build apartment schemes are considered in isolation they are characterised by a density of 176 dph.
-

Dwelling Type	Gross Dwellings per Hectare
Houses	37
Houses and Apartments	58
Apartments	245

**Table 1:** Average residential densities observed in Tameside (1 April 2015 - 31 March 2023)

- 3.30. To prevent developers abusing permitted development rights the Government announced that as of 6 April 2021 all new homes in England delivered through any Permitted Development Right must meet nationally described space standards<sup>25</sup>. Considering both this statement and the appropriate minimum density for apartments the Council recognises that constraints including minimum dwelling sizes, open space requirements, infrastructure, parking and the impact on the existing character of a neighbourhood would have to be taken into consideration, particularly in relation to new builds. Therefore, a minimum of 100 or 150 dph (depending on location) will be applied to apartment scheme as set out in Table 2 below.
- 3.31. Locations judged accessible by non-car modes of transport have been considered for higher density development. The methodology takes into account peak hour rail services at all stations and the density information derived from Table 1 above.
- 3.32. Transport for Greater Manchester's 'Greater Manchester Accessibility Levels' (GMAL) dataset, used in Table 2 below, represents the accessibility from locations to the public transport network, taking into account walk access time and service availability. Additional mapping is included in Appendix 2 setting out the GMAL data and the zones described in Table 2 below.

<sup>25</sup> <https://www.gov.uk/government/news/permitted-development-homes-to-meet-space-standards>

Location Type	Proximity	Proposed Housing Density	Proposed Mixed Density	Proposed Apartment Density
Town Centre Tier 1 (Ashton under Lyne)	800m	N/A	75	150
Town Centre Tier 2 (Droylsden, Denton, Hyde, Mossley, Stalybridge)	500m	N/A	75	100
Railway Station	600m	50	75	100
Metrolink Stop	600m	50	75	100
Minimum GMAL Level 6 <sup>26</sup>	N/A	50	75	100
All other Locations	35			

**Table 2:** Proposed minimum densities based on location in Tameside

- 3.33. However, it is also important to consider neighbouring uses and the existing density and type of development to estimate site yield. Therefore, the densities set out in Tables 1 and 2 are a guide to applying professional judgement and not a rule for estimating the yield of sites that fall within the identified location types.
- 3.34. The estimated development potential (yield) of all residential sites within the assessment is given as a net figure. Should a site include the loss or demolition of any existing dwelling/s, either as a result of planning permission or where considered necessary to make the site developable, this loss will be factored into the site's estimated net development potential figure.

<sup>26</sup> <http://odata.tfgm.com/opendata/downloads/GMAL/GMAL%20Calculation%20Guide.pdf>

3.35. For office, industry, warehousing and retail uses covered by this assessment, estimated development potential should be made having regard to:

- National policy in respect of the sequential approach<sup>27</sup> to town centre uses;
- Extant planning permissions;
- Emerging development proposals;
- Site size and location having regard to similar schemes in the locality;
- Standard plot ratios as set out in ‘Setting Employment Land Targets for the NW of England’<sup>28</sup>. Typically, these are 35% for industry/warehousing and 40% to represent out of centre low density office proposals; and
- Office sites within town centres have been assessed on a site-by-site basis and typically use a higher density.

#### **Assessing the availability of sites for development**

3.36. In order for a housing site to be considered ‘deliverable’ in the short term (0-5 years)<sup>29</sup> it should be available for development now, offer a suitable location for development now, and be achievable with a realistic prospect that dwellings will be delivered on the site within five years<sup>30</sup>. A site can also be considered to be available for development when there is confidence there are no legal or ownership problems and the land is controlled by a developer/landowner who has expressed an intention to develop, or has expressed an intention to sell<sup>31</sup>. In assessing the availability of sites for development the Council has examined land ownership constraints that may be associated with bringing forward sites. This is based on:

---

<sup>27</sup> DLUHC and MHCLG (2019). National Planning Policy Framework, paragraph 86.

<sup>28</sup> Roger Tym & Partners (April 2010), 4NW Setting Employment Land Targets for North West England, Final Report, pages 30-32.

<sup>29</sup> DLUHC and MHCLG (2021). National Planning Policy Framework, paragraph 68.

<sup>30</sup> DLUHC and MHCLG (2021). National Planning Policy Framework, Appendix 2 Glossary.

<sup>31</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph: 019 Reference ID: 3-019-20190722.

- Sites with an extant planning permission, unless there is clear evidence that schemes will not be implemented within five years;
- Examining whether a site is in active use and how likely it is for that use to cease and the site to be redeveloped;
- The likely disposal date of any Council land and other public sector land;
- Ownership information from planning application forms, with the assumption that if a site is within the ownership of the applicant at the time of submission there is a reasonable probability that there are no ownership issues to prevent the site being developed;
- Knowledge of whether a site is owned by a developer, has known developer interest, or is advertised for sale;
- Sites put forward for development by site owners through previous Council call for sites exercises or consultation on potential site allocations as part of the PfE process;
- The delivery record of developers / landowners for bringing sites forward; and
- Whether the planning background of a site has a history of unimplemented permissions.

### **Assessing the achievability of sites for development**

3.37. The PPG advises<sup>32</sup> that a site is considered to be achievable for development where there is a reasonable prospect that the particular type of development will be developed on that site at a particular point in time. This is essentially a judgement around the economic viability of a site, and the capacity of the developer to complete, let or sell the development, over a certain period.

---

<sup>32</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, paragraph: 020 Reference ID: 3-020-20190722.

---

3.38. In assessing whether each site is achievable, consideration has been given to existing land use, adjacent uses, and the level of potential market demand. A number of other factors also inform this assessment, including:

- Whether a site is actively under construction (or similar schemes are);
- Whether a site is in a regeneration area where there are financial arrangements in place to enable development to be completed (for example Homes England funding, the Department for Leveling Up, Housing and Communities and One Public Estate's Brownfield Land Release Fund and/ or the Greater Manchester Housing Investment Fund);
- The known intentions of a developer/landowner relating to bringing a site forward; and
- Obvious costs that would impact on a scheme's viability (for example a site that had previously been used for industrial process or landfill that will need to be remediated).

3.39. In those circumstances where development of a site may be considered unacceptable in planning terms; an assessment will be required to consider what actions are necessary to overcome them, thus making development achievable. Paragraph 55 of the revised NPPF advises that 'local planning authorities should consider whether otherwise unacceptable development could be made acceptable through the use of conditions or planning obligations'. Planning obligations are legal obligations entered into under section 106 of the Town and Country Planning Act 1990 by a person with an interest in the land and the local planning authority; or via a unilateral undertaking by a person with an interest in the land without the local planning authority. Planning obligations are often referred to as 'section 106' or 's106' as well as 'developer contributions' when considered alongside highways contributions and the Community Infrastructure Levy<sup>33</sup>.

---

<sup>33</sup> <https://www.gov.uk/guidance/planning-obligations>, Paragraph: 001 Reference ID: 23b-001-20190315.

- 3.40. Developers may be asked to provide contributions towards infrastructure and/or education by the local planning authority, but they must be informed by evidence and a proportionate assessment of viability. Paragraph 56 of the NPPF recommends that planning conditions should be kept ‘to a minimum and only imposed where they are necessary, relevant to planning and to the development to be permitted, enforceable, precise and reasonable in all other respects.’ Therefore, planning obligations, in the form of section 106 agreements and section 278 agreements should only be used where it is not possible to address unacceptable impacts through a planning condition<sup>34</sup>.
- 3.41. On 8 April 2015 the Council revoked its Developer Contributions SPD in line with the requirements of the Community Infrastructure Levy Regulations 2010 (CIL). Therefore, the Council’s approach to developer contributions is to use section 106 agreements. Through this mechanism the Council seeks financial contributions towards infrastructure to make the development acceptable in planning terms. This process allows developers to enter into negotiations with the Council if the cumulative effect of policy requirements and obligations would compromise development viability.

### **Assessing the suitability of sites for development**

- 3.42. For a site to be considered suitable for development it should be in an appropriate location for development when considered against relevant constraints and their potential to be mitigated. In assessing the suitability of a site for housing and economic development, each site has been assessed against<sup>35</sup>:
- National policy;

---

<sup>34</sup> <https://www.gov.uk/guidance/planning-obligations>, Paragraph: 003 Reference ID: 23b-003-20190901.

<sup>35</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, Paragraph: 018 Reference ID: 3-018-20190722.

- The adopted development plan, taking into account how up to date plan policies are;
- Identified constraints and whether they can be overcome;
- Potential impacts including, but not limited to, the effect upon landscapes; including nature and heritage conservation;
- The range of housing and economic needs and other uses;
- Likely market attractiveness for the type of development proposed;
- Contribution to regeneration; and
- Sites in existing development plans or with planning permission.

3.43. Information collected at this stage includes details relating to ground conditions, hazardous installation zones, potential flood risk, Green Belt, recreation areas, and environmental designations (such as Sites of Special Scientific Interest and Greater Manchester Sites of Biological Importance).

3.44. All sites that have extant planning permission or that are allocated (in the saved UDP) for housing and employment uses are considered to be suitable<sup>36</sup>, given that an assessment of suitability informed part of the decision to grant planning permission or allocate the site.

3.45. There are no known sites with extant planning permission in the 2023 SHELAA where circumstances have changed, which would alter their suitability for the development approved.

3.46. The suitability of potential housing and economic sites which are either not allocated in the UDP or that do not have an extant planning permission have been assessed with regard to the NPPF, PPG, saved policies in the UDP, adopted Supplementary Planning Documents and other relevant strategies, including PfE.

---

<sup>36</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment; Paragraph: 018 Reference ID: 3-018-20190722.

3.47. In determining the suitability of such sites, the following key judgements have been made:

- Whether development of a site would encourage the reuse of previously developed (brownfield) land;
- Whether a greenfield site is subject to planning policy protection, for example: Tameside UDP Policies OL4 Protected Green Space and OL6 Outdoor Sport, Recreation and Play Space Developments;
- Whether development of a greenfield site, which is not the subject to planning policy protection, could be considered upon its own merits; and
- All sites within the adopted Green Belt are not considered suitable for development given the very strong protection afforded to them in national policy, this is with the exception of sites with an extant planning permission.

3.48. Land within established employment areas will generally be considered unsuitable for housing development unless justification for this loss could be provided when tested against saved UDP policy E3, the Employment Land SPD and other relevant saved UDP policies. This is only a general assessment and some employment sites identified as suitable for housing may prove not to be when assessed in detail (i.e. when more evidence is available through a planning application), and vice versa.

#### **Constraints that impact on the suitability, availability and achievability**

3.49. Where constraints have been identified, the assessment should consider what action would be needed to overcome them<sup>37</sup>. The PPG is clear that actions might include the following:

- Policies in the NPPF and the adopted / emerging development plan;

---

<sup>37</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, Paragraph: 021 Reference ID: 3-021-20190722.

- Dealing with fragmented land ownership and ransom strip tenancies; or
- Operational requirements of landowners.

3.50. The Council is actively working with a range of investment partners including Homes England, the Greater Manchester Combined Authority and the GM Housing Investment Fund, Greater Manchester Pension Fund and registered housing providers as well as institutional investors to overcome constraints that may prevent sites coming forward.

3.51. Planning policy is being updated through the production of PfE and the Council's emerging Local Plan – Homes, Spaces, Places to remove some constraints to the delivery of new housing, for example through providing a more up-to-date evidence base or through the limited release of land in the Green Belt.

### **Timescales and rate of development**

3.52. The Council will use the information it has gathered on suitability, availability, achievability and constraints to assess the development timescales (including historic data on lead in times and build out rates) to inform delivery rates for the development of each site within the assessment. It is also assumed that sites with extant full residential planning permission are deliverable within the first five-year period. However, major development sites with high yields of 100+ dwellings may take a number of years to complete, and delivery may extend beyond the 0–5-year period (See Table 7). Where there is evidence that development on a particular site will not be achievable within the short term (0-5 years) the site has been moved into the medium term (6-10 years). In addition, for those sites with extant outline planning permission, officers have made a judgment as to whether they can be included in the five-year supply from 1 April 2023 onwards where a landowner/developer has given a clear indication that development will commence in the next five years.

- 3.53. As there is no specific guidance contained within the NPPF relating to non-residential uses the same policy rationale has been applied to the employment sites considered in this assessment.
- 3.54. The Council has reviewed all residential sites with extant full permission and has not identified any approved scheme that is unlikely to commence delivery in the short term (0-5 years). Therefore, yields remain as permitted through development management decisions, however, a small number of sites have been moved to a later period of the housing supply based on up-to-date information e.g. where development had stalled on site.
- 3.55. For all other residential sites, a judgment has been made as to the timescale during which development could come forward. This has been informed by planning policy and sustainability objectives. Considerations included:
- Regeneration and funding priorities within the borough;
  - Whether the site is currently occupied;
  - Whether there are emerging proposals or known developer interest in the site;
  - Competing demands for the site;
  - Likely financial viability of the development;
  - The need for any site assembly;
  - Council data on lead in times and build out rates;
  - The need for infrastructure provision before development could take place; and
  - Market conditions.
- 3.56. With regard to the above considerations each site included within the residential supply has subsequently been placed into one of the following three timescales, based on officer judgement as to when a site is likely to be developed using the evidence available at the time of the study:
- Within the 0–5-year period - 1 April 2023 to 31 March 2028; or
  - Within the 6–10-year period – 1 April 2028 to 31 March 2033; or

- Within the 11–15-year period – 1 April 2023 to 31 March 2038.

3.57. This document represents the land supply position at 1 April 2023 and it is set by the circumstances existing at that time. However, the Council recognises that events may occur that lead to the development of a site occurring sooner or later than predicted.

### **Places for Everyone Joint Development Plan Document – Bolton, Bury, Manchester, Oldham, Rochdale, Salford, Tameside, Trafford and Wigan**

3.58. Places for Everyone proposes the allocation of two sites for residential development and one for economic development within Tameside that have not previously been considered suitable within earlier Council assessments due to their Green Belt status. This 2023 update to the SHELAA is therefore crucial in order to promote the most efficient use of land to meet the need for homes and other land uses in line with Section 11 of the NPPF. The SHELAA supports the strategy set out in PfE, which states that: ‘There is a strong focus in this Plan on directing new housing towards previously-developed sites within the existing urban area. This will help to address existing dereliction and poorly used sites, as well as reducing the need to release greenfield and Green Belt land for development<sup>38</sup>.’

### **Discounted Residential Sites**

3.59. The 2023 SHELAA covers all potential residential development sites that the Council was aware of at the time of the assessment. Discounted sites are those that have been assessed but are not considered suitable for development at this time, including:

- Those that would need a significant change in planning policy in order to receive planning permission for development and which the Council is not proposing to take forward through PfE. This includes sites in recreation uses (such as parks and playing fields), those located in the

---

<sup>38</sup> (GMCA September 2023) Places for Everyone Plan Composite Version, Modifications Version 2023; Paragraph 7.8.

Green Belt, and those that are physically unsuitable for development, for example due to contamination, landfill, topography, flooding or location;

- Those unlikely to come forward during the assessment period due to existing use, such as a current employment site; and
- Those without an extant planning permission and that fall below the site yield threshold of five dwellings or more.

3.60. In this iteration of the SHELAA 878 sites have been discounted for residential development. The total area covered by discounted sites is 395.07 hectares. For completeness a list of these sites, with a reason for their exclusion, is available in Appendix 5.

3.61. However, constraints on some of the discounted sites may be mitigated, subject to further investigation and detailed assessment beyond the scope of the SHELAA, thus allowing the site to deliver residential development in the future. The responsibility to demonstrate how the constraints can be removed to allow residential development is down to the applicant, developer or landowner. Annual reviews of the SHELAA will continue to assess the longer-term potential of discounted sites as planning policy evolves or site circumstances change.

### **Stage 3: Windfall Assessment**

3.62. Windfall development is defined in the NPPF Annex 2: Glossary as: “*sites not specifically identified in the development plan.*”

3.63. Both the NPPF and PPG make reference to a use of a windfall allowance for housing, where justified. Windfall allowance is not mentioned in relation to economic development. Therefore, a windfall allowance will only be applied to housing development.

3.64. Paragraph 71 of the NPPF states that:

*“Where an allowance has been made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends”*

- 3.65. It is worth noting that the last sentence of paragraph 71 states that “plans should consider the case for setting out policies to resist inappropriate development of residential gardens.” However, it is likely that such sites will continue to come forward over the plan period. UDP policy H9 ‘Backland and Garden Development’ provides guidance on this matter. The policy does not rule out this type of development and the Residential Design SPD (Policy RD22: Infill & Backland Sites) specifically states that it can make efficient use of under-utilised land. Therefore, the small sites windfall allowance is based on analysis of all completed developments of less than five dwellings.
- 3.66. As highlighted in paragraph 3.12 the Council includes a small sites windfall allowance as part of the total housing supply for the period 1 April 2028 to 31 March 2038. The allowance has been calculated using historic windfall delivery rates and is set out in Table 3 below.

	2018/19	2019/20	2020/21	2021/22	2022/23	Total	5 Year Average
A Gross	66	54	51	63	58	292	58
B Losses	8	14	9	12	8	51	10
C Net (A-B)	58	36	42	51	50	237	47

**Table 3:** Small Sites Delivery (sites of 1 to 4 dwellings including garden development)

### **Average Windfall Allowance**

- 3.67. Analysis of windfall completions for the last five years period 1 April 2018 – 31 March 2023 indicates that the average allowance is 47 dwellings net per annum. The Council does not believe that an allowance should be applied to the 0–5-year period of the supply as this may result in double counting, as small sites with planning permission are already included. In addition, where delivery on small sites extends into the 6-10 years period these dwellings are also deducted from the total to avoid double counting (15 dwellings total). Therefore, the SHELAA includes an allowance for the years 6 – 15 (1 April 2028 - 31 March 2038) totalling dwellings ( $10 \times 47 - 15 = 455$ ). This allowance will be kept under review on an annual basis through the monitoring of housing completions and losses on small windfall sites.

### **Stage 4: Assessment Review**

- 3.68. The PPG at paragraph 24 states that:

*“Once the sites and broad locations have been assessed, the development potential of all sites can be collected to produce an indicative trajectory. This should set out how much housing and the amount of economic development that can be provided, and at what point in the future.”*

Section 4 of this assessment sets out in detail an indicative trajectory for each type of development.

## 4. Assessment Findings

### Residential Completions

- 4.1. Figure 2 below illustrates the total 4,578 net residential completions in Tameside over the 10-year period 1 April 2013 – 31 March 2023. The cyclical nature of the completion rate over this period can be explained in part by the time taken between granting permission, completion of first dwelling and completion of last dwelling on an individual site. This is explained in further detail within paragraphs 4.20-4.23 below and reflected within Table 7 Estimated Residential Build out Rates and Figure 5 Housing Trajectory.

**Figure 2:** Tameside Residential Completions 1 April 2013 – 31 March 2023

## Housing and Employment Land Findings

4.2. Based on an assessment of sites against the methodology set out in Section 3 above the SHELAA calculates the potential future supply for the following uses:

- Net dwellings – split by houses and apartments;
- Gross office floor space; and
- Gross industrial and warehousing floor space.

4.3. Table 4 below summarises the supply for the period 1 April 2023 to 31 March 2038 depending on whether it needs to be a gross or net figure on the sites identified across the borough for the use types outlined above for the period.

	Development Type		
	Houses & Apartments	Office (sq.m)	Industrial & Warehousing (sq.m)
(A) Gross Additions	5,995	17,817	122,653
(B) Gross Losses	88	-	-
(A-B) Net Change	5,907	-	-

**Table 4:** Summary of supply 1 April 2023 – 31 March 2038

4.4. The list of SHELAA sites that make up the total supply of net dwellings and gross floor space for employment and retail are listed in Appendices 4, 5, and 6.

4.5. The following section of the report sets out further detail on the estimated future supply on the specific sites by development type.

## The potential supply of new housing

- 4.6. The supply of dwellings comprises on specified developable sites and includes the windfall allowance for development on small sites below the site threshold.
- 4.7. The SHELAA identifies a total of 327 sites that are considered developable for dwellings. Appendix 3 lists these sites and provides details covering estimated dwellings numbers and types (houses and/or apartments) and the likely phasing over the period covered by SHELAA.
- 4.8. The anticipated gross number of dwellings to be completed, split between houses and apartments, over the period 1 April 2023 and 31 March 2038 is identified as - 5,995 dwellings and is shown in Table 5 below. When the potential loss of - 88 dwellings is taken into account, through either demolition or change of use, then it is estimated that there is the potential to deliver 5,907 net additional dwellings between 1 April 2023 and 31 March 2038.

	Phasing of Delivery 1 April 2023- 31 March 2038				Dwelling Types	
	2023-2028	2028-2033	2033-2038	Total	Houses	Apartment
Gross Additions	2,020	2,350	1,625	5,995	2,740	3,255
Gross Losses	88	0	0	88	20	68
Net Change	1,932	2,350	1,625	5,907	2,720	3,187

**Table 5:** Phasing of Gross Additions, Gross Losses and Net Change on Residential Sites

- 4.9. Sites within the 2023 housing land supply can be divided into two categories to reflect their planning status; those that have been 'permitted' and those that have 'not been permitted'. Sites that have been 'permitted' have an extant planning permission and are:
- Full, Outline or Reserved Matters residential planning permission;

- Deemed to be Permitted Development; or
- Permitted schemes that are Under Construction.

4.10. There are 221 'permitted' sites with a potential yield of 2,069 net dwellings (comprising 1,060 houses and 1,009 apartments) in the 2023 land supply.

4.11. Those sites which fall within the 'not permitted' category do not have an extant permission and have been identified through:

- An allocation in the development plan;
- Desk top analysis;
- Site assessments;
- Call for Sites exercises; or
- Have previously been subject to the development management process, but no longer have an extant permission (e.g. expired, withdrawn or written off planning permissions).

4.12. There are 106 'not permitted' sites with a potential yield of 3,838 net dwellings (comprising 1,660 houses and 2,178 apartments) in the 2023 land supply.

4.13. The total number of dwellings is broken down to give the percentage split between brownfield, greenfield and mixed. The overall borough brownfield/greenfield/mixed split is given in Figure 2 below.

**Figure 3:** Borough percentage of dwellings split between brownfield, greenfield and mixed site types (Number of dwellings in brackets).

#### **Windfall allowance for small housing sites**

- 4.14. Paragraphs 3.62 to 3.67 of this SHELAA set out the Council's approach to assessing small sites windfall delivery based on trend analysis. This concluded that the Council should make a small site windfall allowance of 47 net dwellings per year based on average annual delivery over the five-year period 2018/19 to 2022/23. However, completions projected for small sites in the 6–10-year period need to be deducted to avoid double counting (15 dwellings).
- 4.15. The Council will, therefore, make an overall small sites windfall allowance of 455 net dwellings for the 10-year period 2028 to 2038 ( $10 \times 47 - 15$ ). The net dwellings is further split to give a small site allowance of dwellings for years 2028-2033 ( $5 \times 47 - 15 = 220$ ) and a small site allowance of dwellings for years 2033-2038 ( $5 \times 47 = 235$ ).

#### **Total housing supply 1 April 2023 to 31 March 2038**

- 4.16. The above analysis of potential housing sites and windfall allowance for Tameside is summarised in Table 6 below and presents the potential housing supply for the period 1 April 2023 to 31 March 2038. The small site windfall allowance can also be further split between houses and apartments. This

split has been calculated using the percentage difference between houses and apartments within the overall 2023 housing land supply, i.e. 46% houses and 54% apartments.

	Total Supply 1 April 2023 - 31 March 2038				Dwelling Type	
	2023-2028 (0-5 years)	2028-2033 (6-10 years)	2033-2038 (11-15 years)	Total (0-15 years)	Houses	Apartments
A - Gross Additions	2,020	2,350	1,625	5,995	2,740	3,255
B - Gross Losses	88	0	0	88	20	68
C - Net Change	1,932	2,350	1,625	5,907	2,720	3,187
D - Net Small sites windfall allowance	0	220	235	455	209	246
C + D = Total Net Change	1,932	2,570	1,860	6,362	2,929	3,433

**Table 6:** Total supply of dwellings - specific sites and small sites windfall allowance

4.17. Figure 4 below shows the data in Table 6 in graph format for the different parts of the plan period 2023 – 2038.

**Figure 4:** Estimated change in net dwellings (1 April 2023 to 31 March 2038)

- 4.18. In relation to the identified short term period 1 April 2023 to 31 March 2028, Table 6 above identifies a potential gross supply of 2,020 dwellings. However, once the anticipated 88 dwelling losses (demolitions and from change of use/conversion) are subtracted from the gross figure the net supply for this period is 1,932. At this stage no windfall allowance has been applied to this period within the supply (0-5). However, consideration may be given to including a small sites windfall allowance in this part of the supply should compelling evidence arise in future.
- 4.19. For the remainder of the supply 1 April 2028 to 31 March 2038, Table 6 identifies a potential gross supply of 3,975 dwellings. Once a small sites windfall allowance of 455 dwellings has been added the net additional supply for the period is 4,430.
- 4.20. As set out in the Planning Practice Guidance<sup>39</sup> this SHELAA includes an indicative trajectory for the rate of housing development. This is based on a number of assumptions for the expected delivery time periods using lead in times and annual build out rates derived from completions data gathered as part of the Council's annual housing monitoring between 2015/16 and 2022/23 (1 April 2015 to 31 March 2023). These are listed within Table 7. For example:
- Minor residential developments of up to four dwellings:
    - Developments of up to four houses have an average lead in time of two years between planning approval and first completion and an average build out rate of one house per year;
    - Developments of up to four apartments have an average two-year lead in time between approval and first completion and an average build out rate of two apartments per year; and

---

<sup>39</sup> DLUHC and MHCLG (2019). Planning Practice Guidance: Housing and economic land availability assessment, Paragraph: 024 Reference ID: 3-024-20190722.

- Mixed development of up to four houses and apartments have an average lead in time of one year between permission and first completion and an average build out rate of three dwellings per year.
- Major residential developments of between 25-49 dwellings:
  - Developments of between 25-49 houses have an average lead in time of two years between planning approval and first completion and an average build out rate of 18 houses per year;
  - Developments of between 25-49 apartments have an average two-year lead in time between approval and first completion and an average build out rate of 38 apartments per year; and
  - Mixed developments of between 25-49 houses and apartments have an average lead in time of one year between permission and first completion and an average build out rate of 16 dwellings per year.
- Major residential developments of 100+ dwellings:
  - Developments of 100+ houses have an average lead in time of one year between planning approval and first completion and an average build out rate of 37 houses per year;
  - Developments of 100+ apartments (use proxy data for 50 - 99 apartments as no data is available for schemes of this size) have a three-year lead in time between approval and first completion and an average build out rate of 59 apartments per year; and
  - Mixed developments of 100+ houses and apartments have an average lead in time of two year between permission and first completion and an average build out rate of 34 dwellings per year.

Development Type	Dwelling Types	Average number years lead in time between approval & completion of first dwelling	Average number of dwellings completed per annum	Average number of years between completion of first & last dwelling/s	Average number of years between permission & completion of last dwelling

**Table 7:** Estimated Residential Build out Rates

- 4.21. Figure 5 is the Tameside housing land trajectory for the 15-year plan period 1 April 2023 – 31 March 2038 and is based on the assumptions in Table 7 Estimated Residential Build out Rates. These assumptions are then projected forwards to give the housing supply trajectory.
- 4.22. The 2023 Trajectory (Figure 5) shows that there is potential for peaks and troughs in the delivery of sites across the plan period. This is particularly noticeable in the 6-10- and 11-15-year periods of the supply.
- 0-5 years shows that the anticipated delivery will decrease from 602 in 2025/26 to 49 in 2027/28.
  - 6-10 year anticipates peaking at 684 in 2030/31 followed by a decline.
  - 11-16 years anticipates further growth period peaking at 556 in 2036/37.
- 4.23. Future challenges remain over how we plan to level out the baseline annual supply and bring sites forward to meet our housing need.

**Figure 5:** Tameside Housing Trajectory 1 April 2023 – 31 March 2038

### Potential supply of new office floor space

- 4.24. This assessment identifies eight sites that are considered to be developable for office use. Of the eight, only seven<sup>40</sup> are considered to be deliverable within the 15-year period covered by this assessment. Details of the sites are set out in Appendix 4 (List of SHELAA Employment sites) which also provides the potential gross floor space in square metres and the likely phasing. Given the dominance in the supply of the available plots at St Petersfield the quantum of gross floor space is principally based on the St Petersfield Development Prospectus<sup>41</sup>.
- 4.25. Table 8 below shows the breakdown of gross floor space for the period 1 April 2023 to 31 March 2038. The potential gross additions are 17,817 sq.m. E(g)(i) office floor space between 1 April 2023 and 31 March 2038.

	Phasing of office floor space			
	2023-2028	2028 to 2033	2033 to 2038	Total 2023 to 2038
Gross Additions	5,084	4,448	8,285	17,817

**Table 8:** Office gross floor space change 1 April 2023 to 31 March 2038

- 4.26. In terms of the proposed Ashton Mayoral Development Zone, the St. Petersfield location is identified with the most potential for new office development up until 2038 and beyond. The SHELAA reflects the potential of this area to deliver the majority of the borough's standalone office floor space, as opposed to office space that is ancillary to other employment development such as industry or warehousing. The delivery of office space at St. Petersfield, in terms of the identified quantum and phasing, is likely to be

<sup>40</sup> Site Ref E-STPETE-018 is identified as potentially delivering 3,793 sq.m in the period 2039/40 onwards.

<sup>41</sup> Tameside Council – St Petersfield Development Prospectus:

<https://www.tameside.gov.uk/Businesses/Ashton-Mayoral-Development-Zone/Future-St-Petersfield>

dependent upon a number of factors including competition from other locations and market demand.

- 4.27. This uncertainty gives rise for the potential for the identified sites to be delivered within different periods to those identified in this assessment. As noted in paragraph 4.25 there is potential for sites to be delivered beyond the plan period, whilst other sites not identified in this assessment may come forward within the plan period. The current trajectory indicates that beyond 2038 there is potential for 3,793 square metres of floor space within the St Petersfield area.

**Figure 6:** Estimated office gross floor space (1 April 2023 to 31 March 2038)

#### **Potential supply of new industrial and warehousing floor space**

- 4.28. Development potential for industry and warehousing is limited to 32 sites across the borough. These are covered by Appendix 4 (List of SHELAA Employment sites), which sets out the potential gross floor space in square metres and the likely phasing of development.
- 4.29. Table 9 below shows the breakdown of gross floor space for the period 1 April 2023 to 31 March 2038. The potential gross additions are 122,653 sq.m.

of industry and warehousing floor space between 1 April 2023 and 31 March 2038.

	Phasing of industrial/warehousing floor space			
	2023-2028	2028 to 2033	2033 to 2038	Total 2023 to 2038
Gross Additions	42,114	35,580	44,959	122,653

**Table 9:** Industry and warehousing gross floor space (sq.m) 1 April 2023 to 31 March 2038

4.30. Figure 7 below shows the estimated gross floor space as set out in Table 8 for the period 1 April 2023 to 31 March 2038.

**Figure 7:** Estimated change in industrial and warehousing floor space (1 April 2023 to 31 March 2038)

#### Potential supply of new retail floor space

4.31. The assessment has identified no retail sites above the 500 sq.m threshold that is deliverable during the period 1 April 2023 and 31 March 2038.

## 5. Annual Five-Year Housing Supply Position

5.1. Paragraph 60 of the July 2021 National Planning Policy Framework (NPPF)<sup>42</sup> states that Government has the objective of significantly boosting the supply of homes. To maintain supply and delivery of housing, paragraph 74 of the NPPF requires Local Planning Authorities (LPAs) to identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years' worth of housing against their housing requirements with an additional buffer of 5%, 10% or 20% depending on local circumstances.

5.2. Having regard to paragraph 74 of the NPPF, in order to identify whether there is a five-year housing land supply it is necessary to:

- Identify the housing requirement for the five-year period.
- Identify the appropriate buffer.
- Identify the scale of housing that it is estimated will be delivered over the next five years.
- Calculate whether the identified supply of housing is sufficient to meet the five-year requirement with the appropriate buffer.

These stages and the findings are presented in the following sections of this chapter.

### Five-year housing requirement

5.3. The second sentence of paragraph 74 of the NPPF requires that:

“Local Planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years' worth of housing against their housing requirement set out in adopted strategic policies<sup>38</sup>, or against their local housing need where the strategic policies are more than five years old<sup>39</sup>”

5.4. The footnotes referred to in paragraph 74 set out the following points:

---

<sup>42</sup> National Planning Policy Framework - <https://www.gov.uk/government/publications/national-planning-policy-framework--2>

---

- Footnote 38 – “For the avoidance of doubt, a five-year supply of deliverable sites for travellers – as defined in Annex 1 to Planning Policy for Traveller Sites – should be assessed separately, in line with the policy in that document.”
- Footnote 39 – “Unless these strategic policies have been reviewed and found not to require updating. Where local housing need is used as the basis for assessing whether a five-year supply of specific deliverable sites exists, it should be calculated using the standard method set out in national planning guidance.”

5.5. The local housing need component of footnote 39 is defined in Annex 2 of the NPPF as:

“The number of homes identified as being needed through the application of the standard method set out in national planning guidance (or, in the context of preparing strategic policies only, this may be calculated using a justified alternative approach as provided for in paragraph 61 of this Framework)”.

5.6. Tameside does not have an up-to-date housing requirement in any adopted strategic policy. Given this situation, the requirement to use the local housing need calculation set out in paragraph 74 of the NPPF is engaged in order to assess Tameside’s five-year housing land supply position. Therefore, the requirement is based on local housing need in line with the methodology set out in national planning practice guidance.

### **Current Local Housing Need calculation**

5.7. The Government’s national planning practice guidance<sup>43</sup> explains that the standard method to calculate a minimum annual local housing need figure as follows:

1. Setting the baseline
2. An adjustment to take account of affordability

---

<sup>43</sup> DLUHC and MHCLG (last updated 16 December 2020), Housing and economic needs assessment, <https://www.gov.uk/guidance/housing-and-economic-development-needs-assessments>

---

3. Capping the level of any increase
4. Cities and urban centres uplift

### **Setting the baseline**

- 5.8. Planning Practice Guidance sets out step 1 of calculating the LHN as follows:

“Set the baseline using national household growth projections<sup>44</sup> (2014-based household projections in England, table 406 unitary authorities and districts in England) for the area of the local authority. Using these projections, calculate the projected average annual household growth over a 10-year period (this should be 10 consecutive years, with the current year being used as the starting point from which to calculate growth over that period). Note that the figures displayed are rounded and individual cells need to be viewed in order to see the full number.”

### **An adjustment to take account of affordability**

- 5.9. Planning Practice Guidance sets out step 2 of calculating the LHN as follows:

“Then adjust the average annual projected household growth figure (as calculated in step 1) based on the affordability of the area.

The most recent median workplace-based affordability ratios, published by the Office for National Statistics at a local authority level, should be used.

No adjustment is applied where the ratio is 4 or below. For each 1% the ratio is above 4, the average household growth baseline should be increased by a quarter of a percent. An authority with a ratio of 8 will have a 25% increase on its annual average household growth baseline.”

Where an adjustment is to be made, the precise formula is as follows:

---

<sup>44</sup> DLUHC and MHCLG (last updated 24 January 2017), Household projections, <https://www.gov.uk/government/collections/household-projections>

---

$$\text{Adjustment factor} = \left( \frac{\text{Local affordability ratio} - 4}{4} \right) \times 0.25 + 1$$

### **Capping the level of any increase**

- 5.10. The relevant paragraphs of Planning Practice Guidance for step 3 of calculating the LHN are follows:

“Where the relevant strategic policies for housing were adopted more than 5 years ago (at the point of making the calculation), the local housing need figure is capped at 40% above whichever is the higher of:

- a. the projected household growth for the area over the 10-year period identified in step 1; or
- b. the average annual housing requirement figure set out in the most recently adopted strategic policies (if a figure exists).”

### **Cities and urban centres uplift**

- 5.11. A 35% uplift is then applied for urban area in the top 20 cities and urban centres. Tameside is not identified as one of the top 20 urban local authorities as at December 2020 (Correct at the time of publication) and therefore the 35% is not applied.

### **LHN calculation**

- 5.12. Having regard to the guidance set out above, the baseline has been set using the projected annual household growth over a 10-year period using the 2014-based household projections, with 2023 being the first of the ten years given that the five-year supply period being considered within this report is for the period 2023 to 2028. The most recent ONS median workplace-based affordability ratios for Tameside are for 2022.
- 5.13. Taking into account the above, the current local housing need figure for Tameside is 681 per annum. The steps showing how this is calculated are as follows:

	Calculation - variables and stages	Tameside
<b>A</b>	2023-2033 household increase (2014 based household projections)	5,669
<b>B</b>	2023-2033 Average annual household increase (A ÷ 10)	567
<b>C</b>	Local affordability ratio (2022 median house price to median gross annual workplace-based earnings)	7.21
<b>D</b>	$\text{Adjustment factor} = \left( \frac{\text{Local affordability ratio} - 4}{4} \right) \times 0.25$	-
<b>E</b>	$\text{Adjustment factor} = \left( \frac{3.21}{4} \right) \times 0.25$	0.200625
<b>F</b>	Minimum annual housing need figure calculation (= 1 + adjustment factor)	1.200625
<b>G</b>	Local housing need = 567 x 1.200625 (B x F)	681
<b>H</b>	Five-year requirement = 681 x 5	<b>3,405</b>

**Table 10:** Local Housing Need and the Five-Year Requirement

- 5.14. Therefore, by applying the national methodology for calculating local housing need the five-year housing requirement for Tameside is **3,405** dwellings.

### Supply buffer and requirement

- 5.15. Paragraph 74 of the NPPF goes on to specify what level of buffer should be applied to the five-year housing land supply:

“The supply of specific deliverable sites should in addition include a buffer (moved forward from later in the plan period) of:

- a) 5% to ensure choice and competition in the market for land; or
- b) 10% where the Local Planning authority wishes to demonstrate a five-year supply of deliverable sites through an annual position statement or recently adopted plan<sup>40</sup>, to account for any fluctuations in the market during that year; or
- c) 20% where there has been significant under delivery of housing over the previous three years, to improve the prospect of achieving the planned supply<sup>41</sup>”

5.16. The footnotes referred to above in paragraph 74 set out the following points:

- Footnote 40: For the purposes of paragraphs 74b and 75 a plan adopted between 1 May and 31 October will be considered ‘recently adopted’ until 31 October of the following year; and a plan adopted between 1 November and 30 April will be considered recently adopted until 31 October in the same year.
- Footnote 41: This will be measured against the Housing Delivery Test, where this indicates that delivery was below 85% of the housing requirement.

5.17. Tameside Council has not demonstrated a five-year supply of deliverable sites through an annual position statement or a recently adopted plan in accordance with paragraph 74b; on this basis a 10% buffer is not considered applicable.

5.18. With regards to applying a 20% buffer as set out in paragraph 74c, this is linked to Housing Delivery Test (HDT) results. The most recent 2021 HDT measurement results were published by DLUHC in January 2022; covering the period 2018 to 2021 the results identified that in Tameside housing delivery performance was 91% of the housing requirement. Given this, the Council was required to produce an action plan as a consequence of the 2021 HDT.

5.19. Therefore, given the above findings of the 2021 HDT it is considered that a 5% buffer is appropriate in line with paragraph 74a of the NPPF to ensure choice and competition in the market for housing land.

#### **Housing requirement with buffer**

5.20. Using the identified requirement outlined above, the net additional housing requirement over the period 2023 to 2028 with an additional 5% buffer is 3,455 dwellings. This is set out in the table below:

<b>Methodology</b>	<b>2023-2028 Net additional housing requirement</b>	<b>2023-2028 Net additional housing requirement with 5% buffer</b>
Local housing need methodology (using 2014 based household projections)	3,405	<b>3,575</b>

**Table 11:** Local Housing Need and 5% Buffer**Supply of deliverable sites 1 April 2023 to 31 March 2028**

- 5.21. As set out in section 4 of this document, the Council has calculated the deliverable supply for the five-year period 2023 to 2028 to be **1,924** net additional dwellings. The sites that make up Tameside's five-year supply are listed in Appendix 3 - Residential Supply 2023 – 2028.

**Tameside's Annual Five-Year Housing Land Supply Position**

- 5.22. Having regard to the local housing need requirement with a 5% buffer, and the five-year supply of deliverable sites identified in the SHELAA, the five-year land supply position in Tameside over the period 1 April 2023 to 31 March 2028 is shown in the table below:

	<b>Five Year Housing Land Calculation</b>	<b>Tameside</b>
<b>A</b>	2023-2028 Supply of Net Dwellings	1,924
<b>B</b>	2023-2028 Requirement	3,405
<b>C</b>	2023-2028 Requirement with 5% Buffer: $3,405 + 170$ (B + 5%)	3,575
<b>D</b>	Annual Requirement (Including Buffer): $3,575 \div 5$ (C $\div$ 5)	715
<b>E</b>	Number of Years Supply: $1,924 \div 715$ (A $\div$ D)	2.7

**Table 12:** Five Year Housing Land Supply Calculation

- 5.23. The table above shows that there is a 2.7 year's supply of deliverable sites for housing for the period 1 April 2023 to 31 March 2028 in Tameside. This

outcome means that the presumption in favour of sustainable development, as set out in NPPF paragraph 11d, including footnote 8, applies<sup>45</sup>.

### **Tameside's Annual Five-Year Housing Land Supply Position - Places for Everyone Scenario**

- 5.24. Table 12 below presents an alternative scenario taking into account the proposed policy approach in PfE set out in Policy JP-H1: Scale, Distribution and Phasing of New Housing. This is covered by Table 7.2 of PfE for the period 2022-2039. Therefore, Table 12 takes the proposed annual average of the relevant years that cover the period 1 April 2023 to 31 March 2028 to arrive at a minimum number of net additional dwellings that are required for that period.
- 5.25. The table below shows that under the PfE scenario there is a 4.75-year supply of deliverable sites for housing for the period 1 April 2023 to 31 March 2028 in Tameside.

	<b>Five Year Housing Land Calculation – PfE Scenario</b>	<b>Tameside</b>
<b>A</b>	2023-2028 Supply of Net Dwellings	1,924
<b>B</b>	2023-2028 Requirement	1,927
<b>C</b>	2023-2028 Requirement with 5% Buffer: $1,927 + 97$ (B + 5%)	2,024
<b>D</b>	Annual Requirement (Including Buffer): $2,024 \div 5$ (C $\div$ 5)	405
<b>E</b>	Number of Years Supply: $1,924 \div 405$ (A $\div$ D)	4.75

**Table 13: Five Year Housing Land Supply Calculation – PfE Scenario**

<sup>45</sup> NPPF Footnote 8: This includes, for applications involving the provision of housing, situations where the local planning authority cannot demonstrate a five year supply of deliverable housing sites (with the appropriate buffer, as set out in paragraph 73); or where the Housing Delivery Test indicates that the delivery of housing was substantially below (less than 75% of) the housing requirement over the previous three years.

## 6. Relationship to Places for Everyone

6.1. The baseline supply for residential and economic development presented in the SHELAA 2023-2038 does not take into account sites that are proposed for allocation through Places for Everyone. These proposed allocations are not included in the SHELAA baseline supply because they do not currently comply with national Green Belt policy. However, given a lack of existing land supply with sufficient flexibility to ensure that the borough's overall housing and employment requirement can be met, Places for Everyone sets out that a strategic exceptional circumstances case exists for them to be released from the Green Belt for development.

6.2. The three Tameside site allocations identified within the PfE are as follows:

- JPA30 Ashton Moss West: This site allocation has the potential to deliver high quality employment floor space primarily falling within the E(g)(ii), E(g)(iii) and B2 use classes, aimed at delivering facilities suitable for identified areas of economic strength and key growth sectors within Greater Manchester and Tameside. The full 160,000 sq.m is expected to be delivered before 2039;
- JPA31 Godley Green Garden Village: This allocation represents a significant opportunity for Tameside to deliver a new settlement of around 2,350 new homes in the south of the borough. To supplement Tameside's local evidence-based assumptions (see Table 7) Lichfields start to Finish<sup>46</sup> review on the speed of delivery on large-scale housing developments sites has also been referenced. It is therefore anticipated that the allocation will deliver 136 dwellings per annum starting in 2028/29 or a total of 1,496 dwellings by the end of the PfE

---

<sup>46</sup> Lichfields (February 2020) Start to Finish (second edition): <https://lichfields.uk/content/insights/start-to-finish>

plan period in 2039. The remaining 854 dwellings are expected to be completed by 2045/46<sup>47</sup>; and

- JPA32 South of Hyde: This allocation represents an opportunity to deliver around 442 new homes across two parcels of land in advance of the larger more complex sites contained in the GMSF due to their smaller scale. To supplement Tameside's local evidence-based assumptions Lichfields start to Finish' review on the speed of delivery on large-scale housing developments sites has also been referenced. Therefore, the allocation is expected to deliver 74 dwellings per annum starting in 2028/29 and completing in 2033/34.

6.3. The combined net housing land supply of 8,164 net dwellings comprising: existing housing land supply (5,907), small site windfall allowance (455) and PfE site allocations (1,802) over the 15-year period covered by the SHELAA (2023-2038) is illustrated in Figure 8.

---

<sup>47</sup> The delivery rate for JPA31 Godley Green Garden Village has been revised in line with the updated Table 7 in this document and therefore differs from that previously published.

---

**Figure 8: Tameside Housing Trajectory 2023-2038 All Sites**

## 7. Conclusions

- 7.1. This SHELAA represents a snapshot of the potential housing and economic development land supply in Tameside for the period 1 April 2023 to 31 March 2038.
- 7.2. Planning applications for the uses identified in this assessment will continue to be determined on their individual planning merits in accordance with national planning policy the adopted (2004) Tameside Unitary Development Plan and other material considerations. Therefore, the inclusion of a site within the SHELAA does not imply that either planning permission will be granted or that a site will be allocated in the future local plan. Similarly, if a site is not included it does not indicate that future development for housing or economic development is unacceptable.
- 7.3. In both instances outlined in paragraph 6.2 above, applicants would still need to undertake their own detailed analysis to determine the full development potential of a site. Information relating to sites contained in this assessment merely acts as a useful indication of the potential scale of development and some of the constraints that would need to be taken into account in order to bring them forward.
- 7.4. The following table summarises the development potential on the sites that have been identified in the borough for the period 1 April 2023 to 31 March 2038.

	Development Type		
	Houses & Apartments	Office (sq.m)	Industrial & Warehousing (sq.m)
Gross Additions	5,995	17,817	122,653
Gross Losses	88	-	-
Residential Small Site Windfall Allowance	455	-	-
Net change	6,362	17,817	122,653

**Table 13:** Change in dwellings and economic floor space 1 April 2023 – 31 March 2038

- 7.5. A baseline supply of 5,907 net dwellings (5,995 gross additions – 88 gross losses = 5,907 net) has been identified for residential development. When combined with the small sites' windfall allowance of 455 dwellings the net total for the period 1 April 2023 to 31 March 2038 is 6,362 dwellings.
- 7.6. For economic development the following potential gross additional floor space has been identified for the period 1 April 2023 to 31 March 2038:
- Office – 17,817 sq.m
  - Industry and Warehousing – 122,653 sq.m
- 7.7. Once adopted PfE will identify additional land for housing and economic uses in Tameside but will not identify any additional floor space for office or retail development on strategic allocations in Tameside.

# Appendices

## Appendix 1 – Residential Densities 1 April 2015 - 31 March 2023

### Major Residential Development Sites of 10+ Houses
