[^0]:    The 4-point response is scored 0-3 (Not at All=0, Just A Little=1, Quite a Bit=2, and Very Much=3). Subscale scores on the SNAP-IV are calculated by summing the scores on the items in the specific subset (eg., Inattention) and dividing by the number of items in the subset (eg., 9). The score for any subset is expresses as the Average Rating-Per-ltem. The 5\% cutoff scores for teachers and parents are provided. Compare the Average Rating Per Item score to the cut off score to determine if the score falls within the top $5 \%$ of extreme scores.
